

## Banners

Building Wraps

PVC Banners

### Internal and External Banners

Banners are a versatile direct advertising medium, providing a cost effective and highly visual way to deliver promotional messages or raise awareness.

Using a wide range of substrates suitable to the display's environment, banners can be produced in all shapes and sizes. Substrates range from PVC, knitted fabrics and non woven polyester to satin, canvas or banner paper can be digitally printed with full colour photographic images to provide a promotional display that is visually stunning and, as we are able to closely match pantone colours, in line with your brand image.

Display and mounting options are limited only by the surrounding environment.

External banners can be attached to buildings on scaffolding or frames, for small promotional displays or full building wraps, alternatively, frames can be free standing, ideal for events and areas where a suitable fixed structure is not available. Banner arms can be attached to lamp posts or other street furniture to display promotional messages, ideal for city centres, retail parks and large sports or music venues.

A range of free standing internal display stands provide solutions for exhibitions, promotional events, retail environments and showrooms whilst hanging systems allow for maximum exposure without cluttering floor space.

### Benefits

- Effective Highly visible advertising and branding
- Durable Substrates suitable to the display environment
- Cost Effective Simply order banners for existing display systems
